

The TecLine Swivel Chair

Laboratory and Medical

Activities requiring high levels of concentration such as for example the fine adjustment of machine parts in industrial manufacturing areas are often carried out in a fixed seated posture for hours on end. The extremely unbalanced loads often cause health problems ranging from muscular tension and headaches to the dreaded slipped disc. Solid chairs with special features which encourage dynamic sitting help solve this problem. The counter swivel chair features a backrest that follows properties of polyurethane, it can be easily cleaned, making the stool ideally suited to be used in areas with liquids.

Cleanroom and ESD

ESD and Cleanroom: The combination of the cleanroom chair, where cleanliness of the air is required, together with the electrostatic discharge qualities, which reliably prevent electrical discharge through electrostatic dissipation, ensures the most sophisticated of technical seating products. Morrell offers an ESD chair with Class 100 cleanroom classification together with ergonomic features which enables the user to work longer hours at an increased concentration level.

Checkout

Check Out: There are very specific conditions in the checkout area. The greatest burdens are the limited range of movement and the long working hours. The checkout chairs from Morrell are specifically designed to cope with these conditions. They also provide the frequently changing personnel with the best possible support when handling goods in a slightly forward posture, when handling money in an upright posture and when waiting in a leant-back posture. The adjustability of the chairs also enable the frequently changing personnel to adjust the chair for their requirements.
